

Rajdeep Pal

rajdeppalwork@gmail.com | +91-9205322901 | linkedin.com/in/rajdeep-pal01 | github.com/rajdeppal01

Professional Summary

Cybersecurity-focused B.Tech CSE student with hands-on experience in threat detection engineering, SOC operations, SIEM workflows, and security automation. Experienced in developing and validating security monitoring solutions using Wazuh, Suricata, PowerShell, and Python, with a strong interest in AI-driven cybersecurity and threat intelligence.

Education

B.Tech Computer Science Engineering (Cybersecurity & Forensics)	2023 – Present
UPES, Dehradun	CGPA: 7.75
Class XII (CBSE)	2022 – 2023
Amity International School, Gurgaon	84.2%
Class X (CBSE)	2020 – 2021
Amity International School, Gurgaon	91.7%

Technical Skills

- **Programming & Scripting:** Python (FastAPI, SQLAlchemy, Celery, Paramiko), JavaScript (Vanilla JS, WebSockets), HTML5/CSS3, SQL (PostgreSQL), Java, C++
- **Infrastructure & DevOps:** Kubernetes (Minikube), Docker, Red Hat Enterprise Linux 9 (RHEL 9), Git, Bash, PowerShell, Postman, Tkinter, VirtualBox, Kali Linux, Ubuntu, Windows
- **AI-Security Integration:** LLM API Integration (Gemini 2.5 Flash, Claude), Autonomous ReAct Agent Loops, Cognitive Security Planning, Automated Remediation Code Generation.
- **Security Concepts:** OWASP Top 10, Static/Dynamic Application Security Testing (SAST/DAST), Cryptographic Guardrails, Network Intrusion Detection Systems (NIDS) Evasion, Threat Modeling

Experience

Cybersecurity Intern (Security Product Testing and Penetration)	June 2026 – Present
Jio Platforms Limited, Navi Mumbai	

- Jio Cybersecurity Suite: A converged, cognitive security intelligence platform combining automated vulnerability assessment (Netra0) and active threat simulation (Netra1).
- Netra0 (Automated Threat Intelligence & CVE Scanner): Orchestrates automated passive and active target reconnaissance by scanning TCP ports, extracting service banners, and querying live NVD v2.0 API endpoints to identify, rate, and report network vulnerabilities using CVSS severity scores.
- Netra1 (Autonomous Pentesting): Employs an interactive agent powered by a Gemini 2.5 Flash cognitive planner to autonomously execute network intrusion and evasion modules (including packet fragmentation, TLS tunneling, protocol state desynchronization, SSH brute-forcing, and simulated DDoS UDP floods) through a conversational console with built-in safety authorization gates.
- Platform Architecture: Containerized the suite into decoupled microservices (FastAPI gateway, PostgreSQL, Redis, and three segregated Celery worker tiers) deployed via Kubernetes (Minikube) on RHEL 9.

Cybersecurity Intern	Jun 2025 – Jul 2025
Power Grid Corporation of India Limited, Gurgaon	

- Developed and deployed two internal log analysis tools, reducing manual effort by approximately 40%.
- Performed security testing and system behavior simulations to identify vulnerabilities.
- Collaborated with SOC analysts to understand SIEM pipelines, alert prioritization, and threat intelligence integration.

Projects

Event Viewer GUI Tool	PowerShell, WinForms
github.com/rajdeppal01/custom-event-viewer	

- Engineered a lightweight GUI-based alternative to Windows Event Viewer for security monitoring.
- Implemented advanced filtering and automation logic, reducing SOC log triage time by approximately 30%.

Windows Event Log Parser	Python, Tkinter
github.com/rajdeppal01/custom-log-parser	

- Developed a cross-version log parser for Windows, Apache, and web server logs using Python.
- Enabled keyword, severity, and time-window based analysis to detect anomalies and brute-force attack patterns.

Certifications

- AWS Security Learning Plan (2025)
- Deloitte, TATA, and Mastercard Cyber Job Simulations – Forage (2025)
- ISRO: AI/ML for Geodata Analysis (2025)
- ISC2 Certified in Cybersecurity (CC) (2025)

Achievements

- IEEE CIS Student Chapter – PR Associate Head (2025 – 2026)
