Professional Summary

B.Tech CSE student specializing in software engineering, enterprise security, and applied AI. Proven experience building robust full-stack applications, orchestrating microservices, and developing AI-integrated platforms. Highly proficient in mitigating AI hallucinations, implementing strict LLM guardrails, and utilizing advanced prompting, Model Context Protocol (MCP), and Agentic AI Plugins in VS Code to accelerate software development velocity.

Education

UPES, Dehradun, India

B.Tech CSE (Cybersecurity & Forensics) – CGPA: 7.75

Aug 2023 – 2027

Amity International School, Gurgaon

Class XII (CBSE): 84.2% – Class X (CBSE): 91.7%

2019 – 2023

Technical Skills

AI & LLMops: LLMs, RAG Pipelines, Advanced Prompting, MCP, Guardrails, VS Code Agentic Plugins
Security & Tools: Threat Modeling, Vulnerability Assessment, SOC Operations, SAST/DAST, SIEM, Metasploit
Programming: Python (FastAPI, SQLAlchemy), TypeScript, React, C/C++, PostgreSQL, PowerShell
Infrastructure: Docker, Kubernetes, AWS Lambda, Terraform, GitHub Actions (CI/CD), Linux (RHEL/Ubuntu)

Experience

Cybersecurity Intern (Security Product Testing & Penetration)

June 2026 – July 2026

Jio Platforms Limited, Navi Mumbai

- Engineered an autonomous AI agent utilizing smart prompt engineering to execute 9 distinct network attacks at 10,000 PPS, evaluating NID resilience.
- Deployed a highly scalable proxy-aware backend leveraging PostgreSQL, Redis, and Celery on RHEL 9, and built a static analysis engine that reduced manual malware inspection time by 60%.
- Earned a strong letter of recommendation from the Senior Infrastructure & Security Engineer, commended for exceptional analytical skills, rapid technical assimilation, and professionalism in security product validation.

Cybersecurity Intern (SOC & Log Analysis)

Jun 2025 – Jul 2025

Power Grid Corporation of India Limited, Gurgaon

- Leveraged VS Code Agentic AI plugins to rapidly develop and deploy Python-based log analysis tools integrating active threat intelligence to filter out 1,000+ false positive alerts.
- Conducted security testing and system behavior simulations to successfully identify 15+ critical vulnerabilities.
- Streamlined SIEM pipelines and collaborated with SOC analysts, reducing manual triage effort by 40% and improving alert prioritization speed by 25%.

Projects

Jio Cybersecurity Suite (JCS) – *Python, FastAPI, Docker Compose, Celery*

2026

- Built an autonomous pentesting orchestration system leveraging advanced LLM prompts with near-100% NIDS evasion success, executing dynamic tool routing.
- Processed 50,000+ CVEs via SQLite/NVD parsing and developed modules for deep static malware analysis including hex dumping and YARA parsing.
- Orchestrated a microservice pipeline handling 2,000+ concurrent requests, generating zero-latency threat summaries.

Q – *React, FastAPI, PostgreSQL, WebSockets*

2026

- Engineered an enterprise-grade governance control plane for autonomous AI agents, mitigating AI hallucinations through real-time monitoring and a policy engine with strict human-in-the-loop (HITL) guardrails.
- Developed a Python SDK and a real-time React dashboard for comprehensive audit trailing, mapping agent operations to NIST AI RMF and OWASP Agentic Top 10 compliance frameworks.

CyberSentinel AI – *TypeScript, WebLLM, WebSockets*

2026

- Built a real-time SOC dashboard utilizing WebSockets for sub-100ms threat alerts, integrating network visualization and managing 50+ concurrent sandbox terminals.
- Integrated local, in-browser LLM inference utilizing Model Context Protocol (MCP) to autonomously evaluate 500+ mock SIEM signals daily, accelerating remediation workflows by 60%.

TrackrAI – *React, FastAPI, PostgreSQL*

2026

- Configured a secure serverless backend utilizing OAuth2 for authentication and RBAC, adhering to OWASP API security guidelines.
- Leveraged RAG pipelines and smart prompt engineering to build an automated background worker parsing email receipts, securely processing PII and application data with 98% accuracy.

Certifications

ISC2 Certified in Cybersecurity (CC) – AWS Security Learning Plan (2025) – IIT Bombay Enginow Open Source Hackathon –
Deloitte Cyber Simulation – Forge – TATA Cybersecurity Analyst Simulation – Mastercard Cybersecurity Virtual Program –
MSME PPDC AI-driven Cybersecurity

Participation

IEEE CIS Student Chapter – Core Committee Member & PR Associate Head (2025 – 2026)

Athletics – Member with distinction (2025, 2026)
